(54) Title: **PACKAGING FOR PAINT COMPRISING LID WITH INTEGRAL ROLLER TRAY**

(57) Abstract: The packaging comprises a container for the substance, which an open top side and a plastic lid on the top side of the container. This plastic lid comprises a first covering part and a second covering part, the first covering part being provided with a substance-distributing profile on the underside. The first covering part can be pivoted open about a hinge located between the first covering part and the second covering part, in such a manner that, to use the substance-distributing profile, the first covering part can be placed at an angle with respect to the second covering part, which remains connected to the container. The lid is formed integrally from plastic by means of injection moulding, the hinge between the first covering part and the second covering part being moulded as an integral component of the lid and also being leaktight with respect to the substance for which the packaging is intended.
